

DigiLocker

1. Use 1oom.com to record a short video (<= 2 minute) walking us through your above work and talk about it. Share the Loom link as answer to this question. Make sure the link opens publicly.

I chose the DigiLocker app because I use it often as a student to keep my important documents like Aadhaar card, school and college mark sheets, and certificates. It's a really useful app since all the documents are available anytime, but sometimes it's not very easy to use.

When I use it, I feel the app looks a bit old and not well arranged. The home page has too many options, and it's confusing to find what I need quickly. Also, the "Issued Documents" and "Uploaded Documents" sections look similar, which makes it hard to understand where my files are. Uploading new files also takes too many steps and sometimes gets stuck.

I think the app can be improved by making it simpler and cleaner. There can be a student section that shows only education-related documents like marksheets and certificates. A search bar and recently used section would make it faster to find documents. Also, using better colors and icons would make the app look more modern and easy to use.

Overall, DigiLocker is a very good app, but with a few changes, it can become much more friendly for students like me.

2. Provide a Figma/slide-deck/working prototype link of the redesign.
